Academy

MES is known as a knowledge hub. We enhance quality assurance with our expertise via webinars, trainings, testing services, and consulting. In collaboration with samoconsult GmbH, we offer training classes and coaching services in safety and software topics, under the brand name tudoor academy.

You are in the driver's seat if you have your process under control. This particularly applies to the development of safety-critical software. Our academy team supports you in consultancy projects by analyzing, introducing, and optimizing your software development processes in compliance with ISO 26262, IEC 61508, ASPICE, and AUTOSAR, so you can be sure that your processes and tool chains are implemented and applied accordingly. By offering expert seminars, webinars and tool trainings, we teach you to achieve the highest quality standards in the best possible way. Transfer of methods, tools, and best practices is our key to provide you with the best services.

Consulting

Introduction, expansion, and optimization of your software development processes, incorporating the relevant industry standards (e.g. ISO 26262 Process Deployment Service)
