This e-learning platform is brought to you by tudor academy - your gateway to the world of software quality and safety. Discover smart e-content and training modules.

## **Classification of Safety Analysis Methods**

The automotive safety lifecycle according to ISO 26262 mandates the use of a suitable combination safety analysis methods such as Failure Mode and Effects Analysis (FMEA) and Fault Tree Analysis (FTA).

Our microlearning module, which takes approximately 10 minutes, introduces a classification scheme for safety analysis methods and contrasts and compares inductive and deductive safety analysis methods.
